

program selected from the plurality of recipe programs in view of a code input by the code input device; and

a network interface in communication with the controller that request a recipe program from an operably connected, but external device and receives the requested recipe program.

8(Amended). An [A] apparatus, comprising:

means for receiving in an oven a plurality of recipe programs at a network interface from an operably connected, but external device; and

means for storing the plurality of recipe programs in a memory by a controller that are each selectable with a digital signal from a code input device; and

means for configuring the oven in response to the digital signal being associated with one recipe program in the plurality of recipe programs.

12(Amended). The machine-readable signal-bearing medium of claim [5] 11, further comprising:

formatting a recipe program request message in response to the controller failing to select a recipe program from the plurality of recipe programs that is associated with the digital signal; and

receiving a requested recipe program at the network interface from an operably connected, but external device in response to the recipe program request message.
